1. Time-to-degree is measured in quarters and is based on graduating cohorts, not entering cohorts. It represents the average time taken to complete the requirements for a degree. Since it takes some students longer to complete their requirements than others, there will be students from multiple entering cohorts in each graduating cohort.

2. Time-to-degree is measured in quarters and is calculated using elapsed quarters from initial enrollment to graduation, regardless of the number of enrolled quarters. That is, quarters on leave of absence still count toward the time-to-degree total for a student.

3. The time-to-degree calculation does not include Summer quarters.

4. The graduating cohort includes those students who received a degree from Fall-to-Summer of each year.

5. Full-time status is defined as 12 units or more attempted in the initial quarter of enrollment.
